Reflexion

Para esta semana, debido a la situacion del pais, fue un poco más difícil llevar la continuidad en virtual, ya que el foco de atención no es lo mismo en virtual que presencial

Seguidamente el tema de AutoGluon, es muy interesante ya que es una herramienta que facilita y simplifica el proceso de construccion de modelos de aprendizaje automatico.

Ventajas

- **Facilidad de uso:** AutoGluon simplifica significativamente el proceso de modelado de aprendizaje automático al automatizar muchas tareas complejas, lo que lo hace accesible incluso para aquellos con poca experiencia en ciencia de datos.
- **Optimización de hiperparámetros:** Una de las características más útiles de AutoGluon es su capacidad para buscar de manera exhaustiva los mejores hiperparámetros para un modelo, lo que a menudo puede ser un proceso largo y complicado para los científicos de datos.
- **Versatilidad:** AutoGluon puede utilizarse para una variedad de tareas, incluyendo clasificación, regresión y modelado de series temporales, lo que lo convierte en una herramienta valiosa para una amplia gama de aplicaciones de aprendizaje automático.

Desventajas

- **Falta de control personalizado:** Aunque la automatización es beneficiosa, puede limitar la capacidad de los usuarios para realizar ajustes personalizados en el proceso de modelado, lo que podría ser un problema en aplicaciones más complejas que requieren un enfoque más específico.
- **Poca transparencia en el proceso de modelado:** Aunque AutoGluon ofrece resultados efectivos, la falta de transparencia en el proceso interno de modelado podría dificultar la comprensión de por qué un modelo en particular fue seleccionado o descartado.

- Requisitos de hardware y tiempo de ejecución: Algunos modelos generados por AutoGluon pueden requerir recursos computacionales significativos, lo que puede ser un obstáculo para aquellos con recursos limitados o restricciones de tiempo.
